10 CONSECUTIVE YEARS

Exceeding Survival Rates in Allogeneic Transplants

*For the tenth consecutive year (2009-18) NH-BMT achieved survival outcomes that significantly exceeded the expected range as reported in the Center for International Blood and Marrow Transplant Research Final 2018 Transplant Center Specific Survival Report, December 10, 2018 and from reported outcome data from Be The Match.

There were 177 adult and pediatric transplant centers included in the analysis. This survival information includes only patients who received their first allogeneic transplant between January 1, 2014 and December 31, 2016 using unrelated or related donors and who had reported follow-up. Specific transplant center information can be found at beethematch.org.
Our Dedication to Patients

V One-year allogeneic survival outcomes that exceed predicted for 10 consecutive years.
V Only attending BMT physicians take call after hours and weekends.
V All BMT physicians focus on clinical patient care year-round.
V Outpatient based allogeneic transplant program which has been shown to improve survival outcomes.
V New dedicated specialty designed 56-bed inpatient unit.
V High ratio of BMT trained pharmacists-to-patients.
V Outstanding re-accreditation with the Foundation of Accreditation for Cellular Therapy (FACT) with no clinical deficiencies for the last six consecutive tri-annual inspections.
